Accelerating Cancer Therapeutics
Pilot Award Pre-Proposal Instructions
Herbert Irving Comprehensive Cancer Center

2023 - 2024

Discovery ● Compassion ● Innovation
cancer.columbia.edu
Accelerating Cancer Therapeutics (ACT) is a therapeutic development accelerator program focused on providing funding, education, partnership, and mentorship to Columbia Investigators, with a goal of advancing novel cancer therapies from the lab towards the clinic. Advice and project guidance will be provided by a steering committee of academic and industry experts in the field of drug development. We work closely with Columbia Technology Ventures (CTV), the Irving Institute *Accelerate* Resource and Translational Therapeutics (TRx) pilot awards, and the Columbia Biomedical Technology Accelerator (BioMedX), to provide early-stage funding and project development resources to investigators with promising scientific ideas looking to advance their discoveries through the translational spectrum to where outside funding would be available for further commercialization.

The Herbert Irving Comprehensive Cancer Center (HICCC) is inviting Columbia University Faculty to submit pre-proposal applications for its annual ACT pilot awards. Investigators in all therapeutic areas (basic, translational, clinical and population sciences) are encouraged to apply. Unique therapeutic targets or ideas with a clear path towards commercialization are of interest. Funding from this pilot award is intended to move projects forward to an inflection point of value (e.g. high throughput screen for hit to lead, dosing studies of small molecules including proteins and chemical compounds, assay development for target mechanism/engagement, pivotal small animal study, design of clinical study) so that they are eligible to explore later stage funding opportunities through Government or Foundation grants and/or industry partnerships. Applicants are strongly encouraged to present a complementary team comprising of at least a basic scientist and a clinical scientist as part of the pre-proposal application.

**APPLICATION PROCESS AND PROGRAM STRUCTURE:**

**Pre-Proposal Submission:** The application process is multi-stage, starting with the submission of a pre-proposal. Applicants should submit pre-proposals for their cancer therapeutics projects via the Submittable portal, as described below.

**Lab-to-Market Life Science Accelerator Boot Camp:** Teams whose pre-proposals are selected will be invited to attend a Lab-to-Market Life Science Accelerator Boot Camp, which consists of interactive sessions that will aid in preparation of the full proposal.

The Boot Camp core sessions run from January through March, with supplemental sessions offered in April and May. **At least one member of the project team (including students and post-docs) must participate in the core boot camp sessions.**

**Full Proposal Submission:** Teams will submit full proposals in March which will outline the target market and feasible milestones for the one-year development project. Details of the full proposal application requirements and format will be provided later.

High-scoring full proposals will be invited to “pitch” their therapeutic solution to a panel of industry and academic experts. Teams selected for funding will receive the support of a mentorship team to guide project progression. Typically, the team will include the following members but will be customized to the project needs:

1. The applicant clinical and basic scientists
2. A TRx/ACT Steering Committee member, Executive-in-Residence (XIR), or other Industry representative
3. A representative from Columbia Technology Ventures and/or Columbia’s Clinical Trials Office

**ELIGIBILITY:**

Principal Investigators must have a full-time Columbia University faculty appointment. Graduate students and post-doctorate trainees can act as project leads with permission from the principal investigators (PIs). Projects must focus on translating a validated target toward commercialization and address a clear unmet medical need in cancer. Projects that focus on new treatments for cancer disease targets, new drugs for known targets and pathways in cancer, and new activities for currently known and/or approved cancer drugs (repurposing) should contact the Program Director before applying to determine if their project is eligible.
AREAS OF INTEREST:
All cancer-related projects with a valid target in any stage of development with translational/commercialization trajectory are encouraged to apply. Additionally, special consideration will be given to applications from Principal Investigators and/or teams of investigators from underrepresented groups. Therapeutic strategies, including small molecules, biologics, novel delivery approaches, gene therapy, and cell therapeutics will be considered.

FUNDING:
At the conclusion of the Boot Camp core sessions, participants will be eligible to submit a full proposal application for a one-year pilot grant of up to $75,000 per project, based on the project’s needs. Funding should be directed to a specific experimental milestone that will make the project eligible for follow on funding through Government or Foundation grants and/or industry partnerships. We encourage that the majority of funds be utilized for project specific study experiments; a smaller portion of the funds may be used towards post-doctoral researcher, graduate student and technician salary. Funding may not be used towards PI and faculty salary.

PRE-PROPOSAL DIRECTIONS:
Pre-proposals are due by 5:00PM ET on Monday, November 20, 2023. Pre-proposals should be completed and submitted through an online form found at ColumbiaLSA.submittable.com. Please allow time to create a Submittable account if you do not already have one.

1) Areas that will be covered on the online form include:
   - **Project Title**
   - **PI Name(s)**
   - **Brief Non-Confidential Abstract**
   - **Project Team**
     A brief description of the clinical and basic scientists and their area of expertise. Please do not include full biosketches.
   - **Project Description and Clinical Need**
     A summary of the project, the current stage of development, and the plan to reach the next stage. Also, a brief description of the medical need and desired indication.
   - **Competitive Landscape**
     A brief description of the current standard of care and how this therapy, if developed, is an improvement over currently available treatment.
   - **Project Needs**
     Describe the resources and expertise needed to progress the project and the amount of funding required to support this next stage of development (max $75,000). Please include a high-level budget. Please indicate if a Columbia Core Lab is needed for the project.
   - **Intellectual Property**
     List if there are patents covering this idea or invention reports with Columbia Technology Ventures.

1) Complete the online form for each section and submit by 5:00PM ET on Monday, November 20, 2023. ColumbiaLSA.submittable.com
REVIEW PROCESS:
Pre-proposals will be reviewed for eligibility and feasibility. Full proposals will be reviewed by a panel of faculty (including HICCC leadership) and industry members with consideration of any potential conflicts-of-interest. Each application will be judged based on the translational and commercialization potential, scientific and medical merit, cancer focus, and feasibility.

NOTE: IRB/IACUC approval is not required at the time of the pre-proposal application but is required prior to receipt of funding.

NOTE: The pre-proposal will be confidential; however, we suggest you discuss the application and project with your Columbia Technology Ventures licensing officer prior to applying. If you do not have a licensing officer, please reach out to techventures@columbia.edu.

RECENT AWARD RECIPIENTS

2019-2020
- Adolfo Ferrando, Brent Stockwell & Nobuko Hijiya
- Harmen Bussemaker & Chaitanya Rastogi
- Yiping Han, Fay Kastrinos & Timothy Wang
- Fatemeh Momen-Heravi & Akiva Mintz
- Cory Abate-Shen, Juan Arriaga, Donald Landry & Shi-Xian Deng
- Harris Wang & Kristin Beiswenger
- Christine Hendon & Hanina Hibshoosh

2020-2021
- Tal Danino & Nicholas Arpaia
- Catherine Spina & Andrea Califano
- Jean Gautier & Brent Stockwell
- Riccardo Dalla Favera & Claudio Scuoppo
- Anjali Saqi & Keith Yeager

2021-2022
- Marta Galan-Diez, Stavroula Kousten & Azra Raza
- Kam Leong
- Joseph Garcia, Charles Karan & Donald Landry
- Adam Mor & Shalom Lerrer

2022 – 2023
- Wei Min & Zhilun Zhao
